EDUCATION

Drexel University | *Bachelor of Science in Computer Science, Minor in Data Science*

Philadelphia, PA

Cumulative GPA: 3.91

Anticipated Graduation June 2027

Concentrations: Software Engineering / Computer Graphics, Vision, and Interaction

TECHNICAL SKILLS

Programming Languages: C#, Python, Java, JavaScript, Dart, SQL, HTML, CSS, C, Kotlin, Swift

Tools & Technologies: AWS (Lambda, S3, CloudFront), OpenAI API, Git, CI/CD, VS Code, IntelliJ, Xcode, Android Studio, Figma, Retool

Frameworks & Data: .NET, Blazor, Flutter, FastAPI, Flask, TensorFlow, Streamlit, Firebase, Oracle SQL, PostgreSQL, Apache Iceberg

Concepts & Systems: OOP, REST APIs, CI/CD, System Design, Data Pipelines, Relational Databases, Full-Stack, Generative AI

PROFESSIONAL EXPERIENCE

Susquehanna International Group | *C#, .NET, Blazor, Oracle SQL, Apache Iceberg, Python, FastAPI*

Philadelphia, PA

Software Engineer Co-op | Operations Development: Internal Positions Team

Mar 2026 - Present

- Built a C#/.NET hypothetical VaR platform resolving instruments by internal ID, ticker, CUSIP, or ISIN; automated external risk-system XML submissions, cutting preparation time from **hours to minutes** for ad hoc requests
- Built and owned an LLM-powered **VaR support chatbot** that translated natural-language questions into safeguarded read-only SQL, returned supporting CSVs, and generated insights to accelerate QA and investigations
- Owned delivery of a risk reporting platform, gathering requirements and automating **14 recurring** position-quality and risk-exception reports via email and Symphony for engineering and operations teams
- Productionized a **VaR processing pipeline** by expanding product coverage; added position counts, dropped-position tracking, production logging, and downstream datasets for quantitative research
- Scaled AI code review to **12+ repositories** across multiple teams, automating code reviews, scoring, and defect detection across engineering codebases
- Extended a **multi-team instrument-authoring platform** for new instrument types across database, application, validation, and UI/UX layers; reduced technical debt and improved business-user UX with actionable errors and tooltips

Comcast | *Dart (Flutter), Kotlin, Swift, JavaScript, AWS Lambda, AWS S3, AWS CloudFront*

Philadelphia, PA

Full Stack Developer Co-op | Sports Experiences Team

Mar 2025 - Sept 2025

- Built a cross-platform **Flutter sports app prototype** with **8 features**: real-time stats, team favoriting, user badges, and interactive challenges designed to increase live-event engagement and retention
- Integrated authentication and deployed the **Flutter prototype** through existing Comcast backend services, validating secure compatibility with **production-scale Xfinity infrastructure** across supported devices
- Partnered across teams to prototype **iOS, Android, web, and TV integrations** for a future Comcast rollout
- Led a **Twitch-style live chat prototype** during a company hackathon; presented it for roadmap consideration and proposed an architecture targeting **thousands of concurrent users** across chats and rooms
- Co-created a Capstone smart-home safety system with Xfinity WiFi; built and presented a **working demo** to **senior leadership**, earning positive feedback on real-world applicability and customer value

NeuroFlow | *Dart (Flutter), Kotlin, Swift, Python (Flask), AWS Lambda, PostgreSQL, Retool*

Philadelphia, PA

Software Engineering Associate & Co-op | Mobile Engineering Team

Apr 2024 - Mar 2025 / Sept 2025 - Mar 2026

- Led a **Kotlin/Swift-to-Flutter migration**, cutting feature file count and complexity by **50%** and streamlining maintenance
- Developed **4 key mobile features**, including notifications serving **100,000+ customers** and third-party gift-card rewards with user limits, while preserving design consistency through the migration and rebrand
- Built **External Health Records** integrations with **AWS Lambda** and optimized targeted backend APIs
- Delivered **40+ production merge requests** across frontend, backend, and mobile repositories, partnering with design and QA to ship features on time, within scope, and through production release
- Shaped a **3-4-month Flutter roadmap** through feasibility reviews and feature prioritization; mentored a new developer on setup and best practices, reaching **full productivity in two weeks**

PROJECTS

Vanguard AI Developer Productivity Analytics | *Incoming Senior Design Project*

Sept 2026 - Jun 2027

- Selected for a year-long **industry-sponsored project** with Vanguard analyzing **AI-assisted developer productivity**

BioXplore (Web Application) | *Python, OpenAI API, TensorFlow, Firebase, Streamlit*

Oct 2023

- Built a 5-page AI education platform combining a **GPT-4 chatbot**, **TensorFlow animal detection**, Geopy geocoding, and Firebase storage for interactive species identification and learning
- Won **1st place** in HackRU's education track among **302 participants** by building and presenting the full application **within 24 hours** and showcasing its AI-powered learning experience
